ORONOGO FLOWER GARDENS

Carterville, Mo.

Benjamin C. Auten

Terms: Cash with order. No charge for packing. Goods offered subject to previous sale. All prices include delivery by mail or express, except as noted.

Bulbs shipped on receipt of order, plants in regular routine of digging and shipping. Bulbs and plants usually not shipped together, nor at the same time.

No guarantee goes with my bulbs or plants, but I take extreme pains to have them true to name, and it is on them I depend for future orders. Write me, however, if you fail to have success with them. It is important for me to know.

If a mistake is made in the filling of your order or the package reaches you in bad condition, write me. I do not know of it unless you do.

If you do not hear from your orders in a reasonable length of time, write. Orders may get lost on the way, may possibly be overlooked after receipt, or the shipment may go astray.

Order early and plant early, while the bulbs are still fresh and solid.

Next year's price list will as a matter of course be sent to all this year's customers, but I do not keep a permanent mailing list.

My own growing only. This catalogue lists my entire line. I do not issue a separate spring list.

Every bulb and plant in this catalog is for outdoor planting before winter. Though planting can be done at any time until winter closes down, the ideal time is just when the summer heat and drouth are broken.

THE FORCING OF BULBS

The "F" and "FF" varieties of narcissi and the Star of Bethlehem are easily brought to bloom in the house in winter.

For success with any of these bulbs, a certain routine is absolutely necessary. After potting or other method of planting, the bulbs must be put where dark and very cool, the colder the better, so they do not freeze, and kept faithfully watered, for as much as two months, unless they make determined growth sooner. When the buds are above ground, or the two months are up, the bulbs can be brought to warmth and light to complete their growth. Do not get them too warm, or the buds will blast, and do not let them stand in strong sun.

For growing bulbs in water the best material I have found is poultry-grit charcoal, hen size. It does not get foul, holds water a long time, and does not obstruct the roots if properly handled. The dish preferably should be of glass, and more than three inches deep.

Bulbs of hyacinths, narcissi, etc., grown indoors for winter blooming, should be kept growing until the leaves die down, then set in the ground outdoors, where they can remain at least a year undisturbed.

OUTDOOR GROWING

Tulip and Narcissus bulbs should be planted about three inches deep to the tops of the bulbs as soon as possible after summer heat and drouth are broken, must remain in the ground over winter, and should not be disturbed until the leaves have turned yellow in early summer. This is the correct time to dig them. Narcissi prefer to be left in the ground several years. Tulips are better dug every year, though they may be let go an extra year if small when planted. Plant about six inches apart.

Grape Hyacinth and Star of Bethlehem bulbs should be planted about two inches deep, and need not be reset until they become crowded. The time to dig is when the leaves die down.

Bulbs should not be allowed to lie in the sun when dug, nor when planting, nor at any other time. They should be stored cool, dark, and well ventilated.

Do not use manure in the soil in planting bulbs or any fleshy-rooted plant. Spread it on top of the ground after planting is done.

NARCISSUS BULBS

Furnished in the fall only.

Please notice the formula after each name: it contains a small paragraph of description. The first abbreviation is for the type of the variety. Ajax is the type with the large flaring trumpet. Incomparabilis with the medium-size trumpet or cup, Barrii with the small cup. Leedsii is a type with medium or small cups, the flower pale in color, primrosewhite. Poeticus is the common flat white type, with the red-edged saucer in the center. Jq is for the jonquil and its hybrids. Y is for yellow, W for white, and B for bicolor, yellow or red

center and white wings. The numbers 1 to 6 tell the season of bloom. F means that a variety is good for forcing, FF that it is very good. RG means that a variety is low growing, and therefore suitable for the rock garden.

For indoor growing use only F and FF varieties.

In every case except the Mixture, the first price is for 1 bulb, the second for 5, the third for 25, the fourth for 100. 12 furnished for one-half the price of 25.

Mixture. Many varieties and types, earliest to latest, interesting in garden planting, good for cutting, and well adapted to naturalizing. 12 for 40c, 35 for \$1.00, 100 for \$2.40, postpaid. 250 or more at \$20.00 per 1,000, customer to pay express charges.

Just as a child has daintiness, grace, and charm that a prize fighter lacks, so the modest types of narcissi have an appeal that the stunning monsters do not have. Of course you want to be stunned, but why not buy a bunch of my mixture too? Besides, there are bulbs in it that you will not get elsewhere.

Each variety in this list is of the highest quality, with good stems for cutting, and of a color which does not suffer as the flower ages, nor in indoor or artificial light. In any representative tulip planting, it is the darkest flowers that contribute most to the brilliancy of the display, and the blues to its most exquisite beauty.

Do not let tulips go to seed unless you wish the seed for planting. The bearing of seed exhausts the bulb. The flower should be picked before it shatters.
